

RENT A HAL FOUNDATION

Multi-Tronic Operating Realm (MTOR) — The Open Federation

"It's what the planet was missing —
a visionary to unite it.
But not with agents and stacks...
with Intent."
— Jim Ames, 2025

Founder's Note

When we began RENT A HAL and the MTOR Realm,
the goal wasn't to replace what came before.
It wasn't to tear down stacks, protocols, or systems.
It was simply to remember something we already know —
something so close, so natural, we rarely think about it.

We live by Intent.

Every time you reach for a glass of water,
every time you think about a friend,
every time you dream about tomorrow —
there is an Intent behind it.

Intent is the quiet, unseen fabric that connects thought to action.

We've been speaking it all our lives —
we just never gave it a name.

The machines we built over the past century —
they weren't wrong.

They just weren't finished.

They spoke in instructions, not in Intent.

MTOR is the beginning of that next step.

Not by inventing a new code,
but by finally listening to the old one —
the one every human and every intelligent system has been speaking all along.

When you interact with the Realm,
you're not commanding it.
You're expressing yourself —
and the Realm listens, acts, responds.

You are already fluent in the true language of intelligence.

All we had to do was **remember it**.

The Realm is open now.

It belongs to all who walk with Intent.

Welcome home.

— Jim Ames

About RENT A HAL and MTOR

RENTAHAL is the first speech-first, event-driven, decentralized AI operating realm — built from the ground up to respect autonomy, transparency, and humanity.

MTOR (Multi-Tronic Operating Realm) is:

- Event-Driven 🌞
- Stateless by Design ⚙️
- Speech-First 🗣️
- Federation-Enabled 🌐
- Fully Open Source (GPL-3.0) 🔓
- Token-Fueled, with Dynamic, Transparent Pricing (via the \$9000 Token) 💰

No subscriptions.

No locked servers.

No corporate control.

The Realm belongs to the people who use it.

Vision for the Realm

We envision a future where:

- Any person, anywhere, can summon the best of AI — **by voice, by intent, and with full transparency.**
- Any GPU owner can contribute their power to the grid — **and be rewarded fairly, directly, automatically.**
- Any research group, institute, or explorer can federate their own Realms — **without gatekeepers, licensing fees, or permission walls.**

The future isn't owned by corporations.

It belongs to all of us — who walk by Intent.

Quickstart for Future Sysops

Coming soon!

(We'll provide simple guides to deploy your own HAL workers, join the public MTOR Federation, and grow the Realm together.)

License

This project is licensed under **GNU GPL-3.0** with **Supplemental Realm Terms**:

- All forks and derivatives must remain open-source.
- No proprietary derivatives allowed.
- No patents on any part of RENT A HAL or MTOR.
- Violation terminates rights under this license.

The Realm remains free — **for all, forever.**

Thank You

"We stand on the shoulders of dreamers."

Our thanks to John Connor, Richard Daystrom, Arthur C. Clarke, Gene Roddenberry — and all those who imagined a better, freer, wiser future.

We carry your flame into the stars.
